(The "X" on the views is a place for picture or something)

"Beginner" level , I think the same can be presented on the advanced view but the there is first writing and then it shows it on image or something.

First selecting tables and chance also to join tables. Maybe with moving (hovering) table to other or some other way?
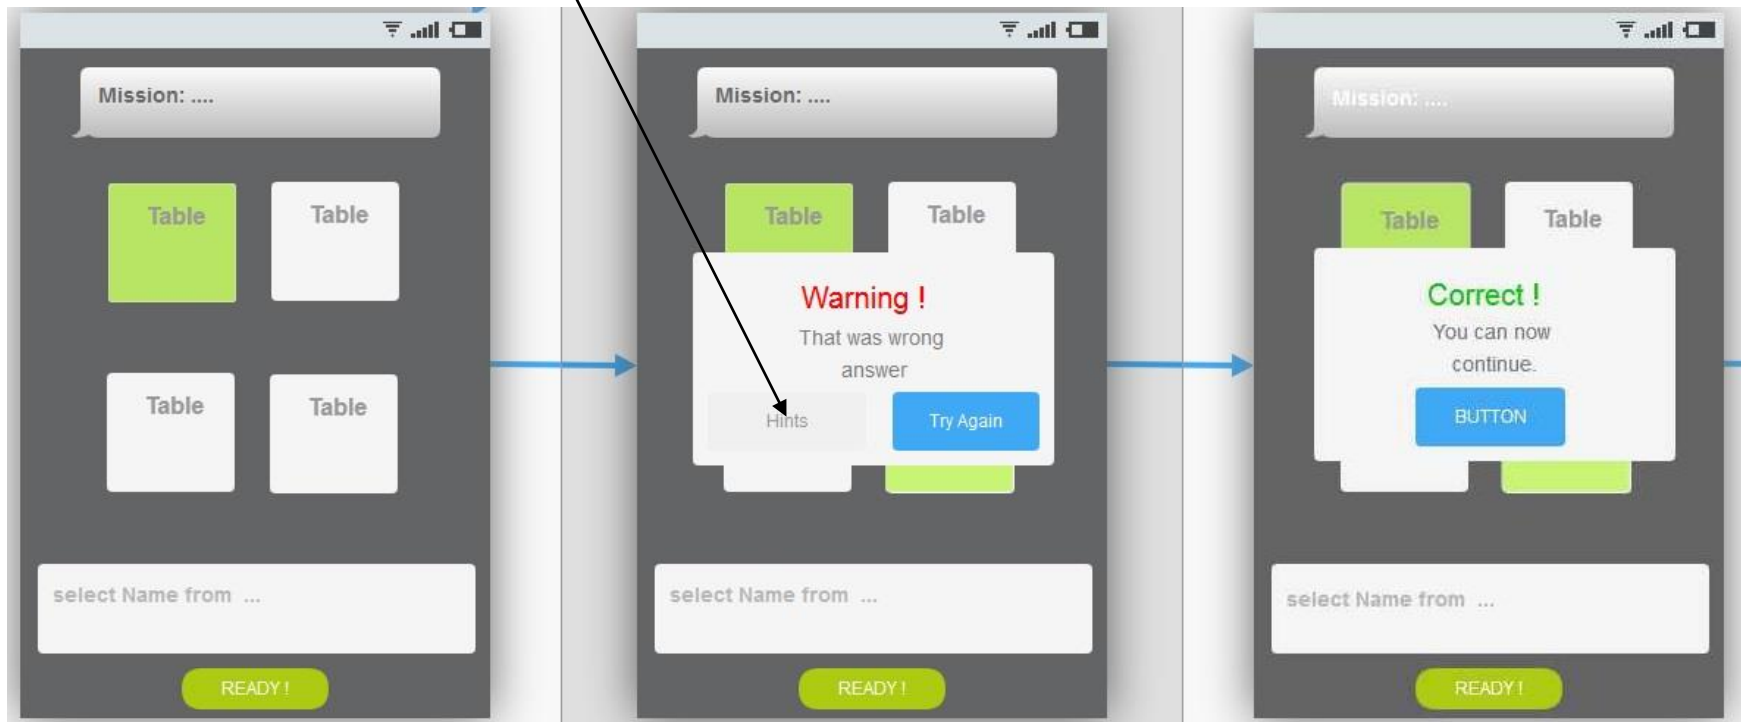

If there is also other "mission" than selecting tables, then choosing table and rows and collums from the table. User could see some part of the table and with swipe he could see other rows. On small devices the view isn't so big. Selected row would be highlighted.

And if there is where clause then there would be highlight on the cell of the table.

Getting feedback

User could get feedback with dialogs. Maybe also on correct dialog would be **amount of points** what the user got from that exercise. When user have had wrong aswer more than one time "hints" would be available if they aren't on on the "settings"

Levels?

Maybe each beginner, advanced, master level has level for exercises.
